

# EXAMPLES OF PROJECTS THAT ARE CONSIDERED REPAIR/REPLACEMENT PROJECTS

## Water Supply Systems:

Repair or rehabilitation of an existing water treatment facility

Installation of a water supply system to replace an existing water supply system, regardless of the differences in capacity between the new and existing system (e.g., 6-inch line replaced by an 8-inch line)

Repair or replacement of an existing water storage tank

Installation of a water storage tank to replace an existing reservoir.

## Waste Water Systems:

Repair or rehabilitation of an existing waste water treatment facility

Installation of a waste water disposal system that replaces an existing waste water disposal system, regardless of differences in capacity between new and existing systems

## Roads:

Resurfacing or reconstruction of surfaced roads

Resurfacing of a road that has been sealed

## Bridges and Culverts:

Construction or installation of a bridge to replace an existing bridge, regardless of the increased capacity of the new bridge

Construction or installation of a culvert to replace an existing culvert, regardless of the increased capacity of the new culvert

## Storm Water Systems:

Repair or replacement of an existing storm water system.

## Solid Waste Facilities:

Rehabilitation or repair of an existing solid waste facility that **does not** result in increased capacity of the facility

# EXAMPLES OF PROJECTS THAT ARE CONSIDERED NEW/EXPANSION PROJECTS

## **Water Supply Systems:**

Installation of a water supply system or water treatment facility in an area that is currently not served by a water supply system. (Private on-site water supply, such as a well for a household, is not considered a water supply system.)

Extension of an existing water supply system

Installation of a water storage tank in an area that currently is not served by a water storage tank or reservoir

## **Waste Water Systems:**

Construction of a waste water disposal system or waste water treatment facility in an area that is currently not served by a waste water disposal system or treatment facility. (Private on-site waste water disposal, such as a septic tank, is not considered a waste water disposal system.)

Extension of an existing waste water disposal system

## **Roads:**

Paving of a gravel road – a road that has not been sealed and is maintained with a grader

Widening of an existing road in order to create a passing lane (only the created lane portion of the improvement is categorized as new and expanded)

## **Bridges and Culverts:**

Construction of a bridge at a site in which no bridge currently exists

Construction of a culvert at a site in which no culvert currently exists

## **Storm Water Systems:**

Construction of a storm water system in an area that is currently not served by a storm water system

Extension of an existing storm water system

## **Solid Waste Facilities:**

Construction of a solid waste facility in an area that is currently not served by a solid waste facility

Expansion of an existing solid waste facility that results in increased capacity
